## Ongoing Research Works

1. **Minimizing Slowdown for Sequential Offloading in Neural Network Inference:** In this project, we investigate minimizing slowdown for neural network execution in a sequentially offloaded manner while also achieving significant memory savings.
2. **Performance Model Based Work Distribution to ML Surrogate in Ptychographic Restoration:** Here we are investigating idea of shared context to improve throughput in continual learning scenarios.
3. **Access Distributed and Deduplicated In-Memory Cache Locally for Distributed Deep Learning Workloads:** In this project, we are investigating an idea to reuse same sized caches across all participating trainers in distributed deep learning
